

Econ 0016 Term 2: International Macro, 2025-2026

Lecturer information

Prof. Franck Portier, f.portier@ucl.ac.uk

Office: 311 Drayton House

Office hours: Tuesdays, 10:00 to 11:00am in my office

This is a course in international macroeconomics. We will study Global Imbalances, the Theory of Current Account Determination in two-period economies, Current Account Determination in a Production Economy, Uncertainty and the Current Account, External Adjustment in Small Economies, the Twin Deficits (Fiscal Deficits and Current Account Imbalances) and the Determinants of the Real Exchange Rate.

The course will strictly follow “*International Macroeconomics: a Modern Approach*” by Stéphanie Schmidt-Grohé, Martin Uribe and Michael Woodford (Princeton University Press, 2022).

My plan is to teach chapters 1, 2, 3, 4, 5, 6, 8, 9 and 10 of the textbook. I may have to adjust if we are going slower or faster than what I expect.

I suggest that you come to the lecture, listen, and then work on the book (read it and do the exercises). But you may also want to read the chapter in advance if you prefer.

As in term 1, video captures of the lectures will only be available after the end of term 2.

In the tutorial sessions, we will do some of the exercises proposed in the book. You can work the others by yourself.

No written solution will be provided for the exercises, but some will be solved in the tutorial sessions.

The material for the course can be found on Moodle and also on my homepage at:

<https://fportier.wordpress.com/teachingenseignement/econ-0016/>

How do you learn on this course?

There will be 20 hours of lectures in Term 2, plus five one-hour tutorials with problem sets to prepare. You will have the option to hand in parts of the problem sets to the TAs that will give you feedback (this will not count for the final grade)

Readings

“International Macroeconomics: a Modern Approach” by Stéphanie Schmidt-Grohé, Martin Uribe and Michael Woodford (Princeton University Press, 2022).

Assessment

Final exam.
