

2017-2018 – DEEQA – TSE – Advanced Macroeconomics

Assignment 1

Franck Portier
f.portier@ucl.ac.uk

Version 1.0
20/11/2017

1. Get output data for the US and another country.
2. Re-do the Pancrazi exercise for these two countries.
3. Compare the HP filter with a Band pass filter 2-32 for the two series (you can get the codes for those two filters on the course webpage)
4. Do the Pancrazi exercise for US data on Investment, Total Consumption, Consumption services, Durable goods purchases, Equipment investment and Structures investment.
5. Repeat Figure 16, 17 (Lecture 2, reproduced below)) analysis for another country, using the business cycle dating proposed by ECRI (<https://www.businesscycle.com>) and given below. These figures are showing, as an average for all quarters that are in a recession, the proportion of quarters in a recession $k \pm w$ quarters after, where w is a window half-length between 1 and 10.

FIGURE 16 – Probability of a recession n periods after a recession (short window)

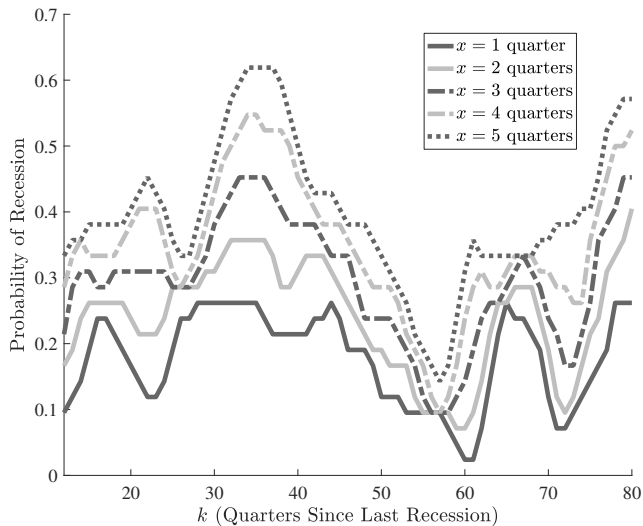

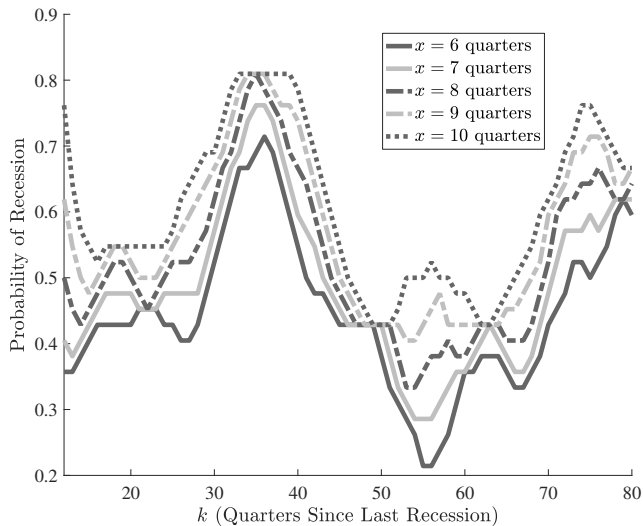

FIGURE 17 – Probability of a recession n periods after a recession (long window)
